Job Application for Software Engineering Intern

Dear Hiring Manager,

About Me

I've always been passionate about technology and solving problems. Everyday gadgets fascinated me, with the computer being the most mystical of all. I am on my journey to study all facets of computing, and your engineering position is the perfect match!

Why Me?

Being an Advanced Data Structures tutor, I have a solid grasp on core computer science concepts. Not only am I skilled in such concepts, but I am also an excellent communicator with a 100% satisfaction rate from students with over 50 hours of tutoring. From my Vice President Finance position at Association for Computing Machinery at UC San Diego, I've demonstrated my leadership abilities by managing my own team and obtaining additional funding from outside sources in addition to our usual allocations which added hundreds of dollars to our budget. I am excited to apply my skills in your company.

Thank You

Thank you so much for considering me for your Software Engineer Internship role. I look forward hearing from you to learn more about this position soon!

Sincerely,

Tristin Xie
